

Agile Product Portfolio

UniHelp Planner - University Student Support Platform

Group number: BUS36
Student: Chenshan Zhang (CXZ530@student.bham.ac.uk)
Git repository: To be added after GitHub upload

1. Planning

Personas: Alex Chen is an international postgraduate student who needs a clear plan and support routes. Dr Sarah Patel is an academic tutor/wellbeing referrer who wants students to seek help earlier.

Product vision: FOR university students WHO struggle to manage academic pressure and find suitable support, UniHelp Planner is a university student support platform THAT helps students prioritise workload, find relevant support resources, and reflect on wellbeing. UNLIKE scattered university webpages and email guidance, OUR PRODUCT gives simple personalised guidance in one workflow.

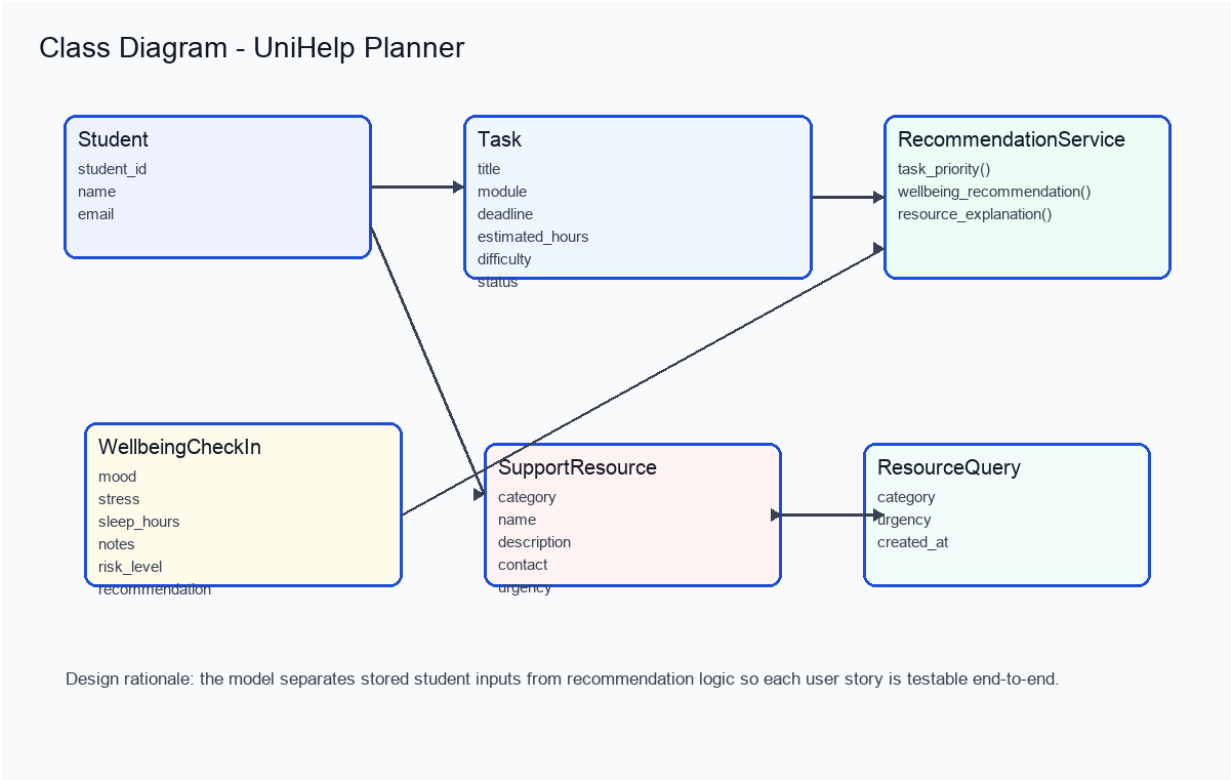

2. Product Backlog and Sprint Summary

ID	Story	Acceptance criteria	Priority	Sprint	Owner
S1	Add coursework tasks and see what to work on first.	Task, deadline, hours, difficulty are saved and prioritised.	Must	1 and refined in 2	Chenshan Zhang
S2	Select a problem type and find support quickly.	Category and urgency return matching resources.	Must	2	Chenshan Zhang
S3	Complete wellbeing check-in and receive guidance.	Mood, stress, sleep are saved and produce risk recommendation.	Must	2	Chenshan Zhang
S4	Login	Valid credentials allow access.	Could	Deferred	Chenshan Zhang

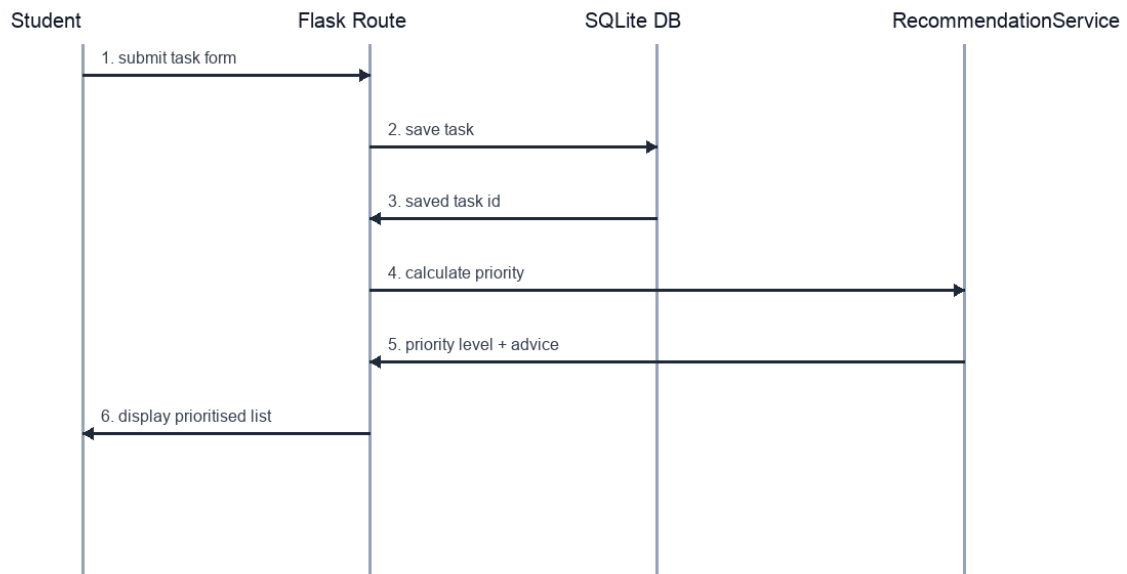

3. Design Evidence

D1 class diagram shows Student, Task, SupportResource, ResourceQuery, WellbeingCheckIn, and RecommendationService.

D2 sequence diagram shows the S1 end-to-end interaction: form input, database save, priority calculation, and visible output.

Sequence Diagram - Add Task and Generate Priority

The same pattern is used for resource search and wellbeing check-in: input, processing, persisted evidence, visible output.

4. Working Prototype

The prototype is a Flask + SQLite + Bootstrap web application. The video unihelp_prototype_demo.mp4 demonstrates S1 workload prioritisation, S2 support finder, and S3 wellbeing check-in. The video duration is approximately 3 minutes 3 seconds.

5. Testing and Evaluation

Story	Test	Outcome	Evidence
S1	POST /tasks saves and displays priority.	Pass	tests/test_app.py, workload screenshots
S2	POST /resources returns category/urgency resources.	Pass	tests/test_app.py
S3	POST /wellbeing saves check-in and recommendation.	Pass	tests/test_app.py
All	Automated pytest suite.	6 passed	submission_evidence/test_results.txt

Appendix - Contribution and Meetings

Chenshan Zhang completed product planning, implementation, testing, documentation, evidence packaging, and video generation.

Meeting log note: solo planning records are included. Replace with real TA/customer meeting details before submission if those meetings occurred.

Member	Roles	Stories	Evidence
Chenshan Zhang	Product owner, developer, tester, documentation owner	S1, S2, S3	Git log, tests, screenshots, video
