1. Planning - Personas

Persona	Role / user type	Goals	Pain points	Stories
Alex Chen	International postgraduate student	Submit coursework on time, understand urgent work, and find support without searching many pages.	Several close deadlines; unfamiliar support routes; may delay asking for help.	S1, S2, S3
Dr Sarah Patel	Academic tutor / wellbeing referrer	Encourage students to seek the right support early and make workload discussions concrete.	Students often describe pressure generally without structured task or wellbeing evidence.	S1, S2, S3

1.2 Product Vision

FOR university students WHO struggle to manage academic pressure and find suitable support, UniHelp Planner is a university student support platform THAT helps students prioritise workload, find relevant support resources, and reflect on wellbeing. UNLIKE scattered university webpages and email guidance, OUR PRODUCT gives simple personalised guidance in one workflow.

2. Product Backlog and Sprint Summary

ID	Feature	User story	Acceptance criteria	Priority	Sprint	Owner
S1	Academic workload	As a student, I want to add coursework tasks with deadlines so that I can see what I should work on first.	Task, deadline, hours, and difficulty are saved and displayed in a prioritised list with advice.	Must	1 and refined in 2	Chenshan Zhang
S2	Support access	As a student, I want to choose the type of problem I am facing so that I can find relevant support quickly.	Category and urgency return matching support resources and contact routes.	Must	2	Chenshan Zhang
S3	Wellbeing reflection	As a student, I want to complete a wellbeing check-in so that I can receive basic guidance on what support action to take.	Mood, stress, and sleep are saved and produce a risk-level recommendation.	Must	2	Chenshan Zhang
S4	Account management	As a student, I want to log in so that my information is private.	Valid credentials allow access.	Could	Deferred	Chenshan Zhang

2.2 Sprint Summary

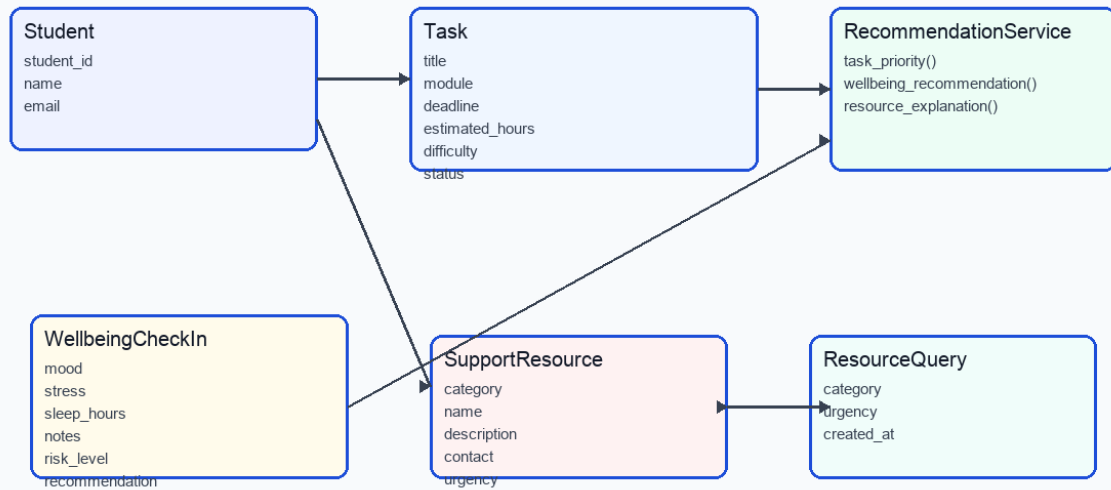

Item	Sprint 1 (Weeks 2-6)	Sprint 2 (Weeks 7-11)
Planned stories	S1	S1 refinement, S2, S3
Delivered stories	S1	S1 refinement, S2, S3
Stories not completed	S4 login was deferred	S4 remained deferred
Key change	Build smallest useful MVP around workload planning.	Improve usability, add support finder and wellbeing check-in.
Learning	A simple planner gave clearer end-to-end value than a broad portal.	Personalised recommendations aligned better with Challenge 3.

3. Design Evidence

D1 class diagram shows Student, Task, SupportResource, ResourceQuery, WellbeingCheckIn, and RecommendationService.

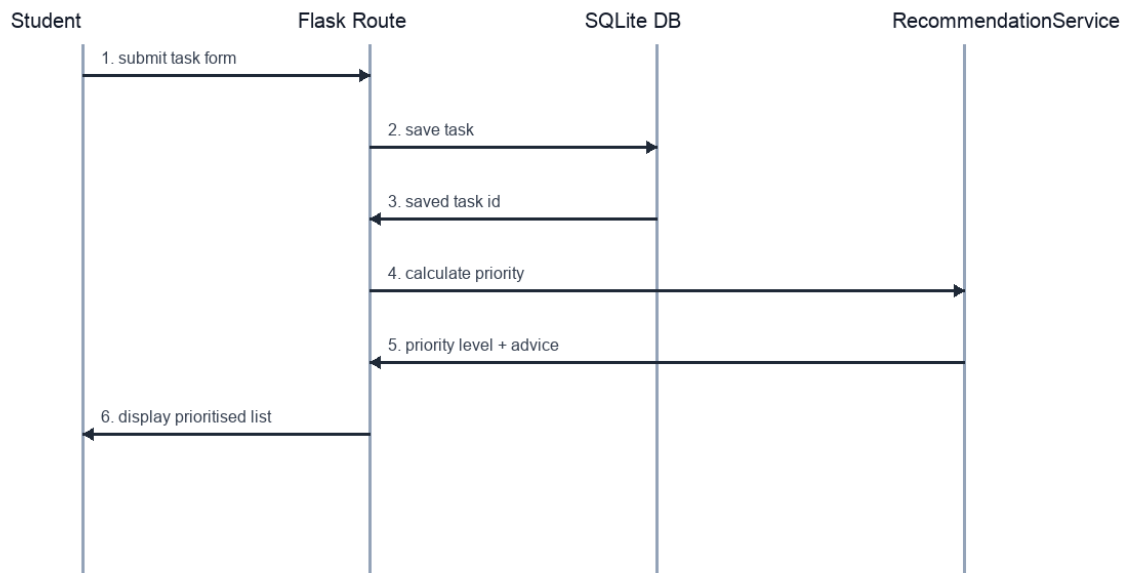

D2 sequence diagram shows the S1 end-to-end interaction: form input, database save, priority calculation, and visible output.

Class Diagram - UniHelp Planner

Design rationale: the model separates stored student inputs from recommendation logic so each user story is testable end-to-end.

Sequence Diagram - Add Task and Generate Priority

The same pattern is used for resource search and wellbeing check-in: input, processing, persisted evidence, visible output.

3.2 Stories and Evidence

Story	Evidence type	Reference	Criteria met	Notes
S1	Source code, automated test, screenshot, video	app/routes.py, app/services.py, tests/test_app.py, workload_screenshot.png, video 0:30-1:25	Yes	Task data is saved and priority advice is displayed.
S2	Source code, automated test, video	app/routes.py, app/db.py, tests/test_app.py, video 1:25-2:05	Yes	Resources are filtered by category and urgency.
S3	Source code, automated test, video	app/routes.py, app/services.py, tests/test_app.py, video 2:05-2:45	Yes	Check-in is saved and high/medium/low recommendation is displayed.

4. Working Prototype

The prototype is a Flask + SQLite + Bootstrap web application. The video unihelp_prototype_demo.mp4 demonstrates S1 workload prioritisation, S2 support finder, and S3 wellbeing check-in. The video duration is approximately 3 minutes 3 seconds.

5. Testing and Evaluation

Story	Acceptance criteria	Test performed	Outcome	Accessibility checked	Notes
S1	Task form saves data and displays priority output.	pytest client POST to /tasks plus browser screenshot.	Pass	Labels and responsive layout checked.	Automated test confirms database row and visible result.
S2	Selected support category returns matching resources.	pytest client POST to /resources.	Pass	Keyboard-selectable form controls.	Urgent wellbeing search returns wellbeing and urgent support routes.
S3	Check-in generates recommendation and stores evidence.	pytest client POST to /wellbeing.	Pass	Labels and range controls checked.	High stress and low mood return high-pressure recommendation.
All	All Done stories have at least one mapped test.	Automated pytest suite.	6 passed	N/A	Evidence file: submission_evidence/test_results.txt.

Appendix A - Group Contribution

Story	Title	Predicted hours	Actual hours	Status	Owner
S1	Prioritise coursework tasks	6	7	DONE	Chenshan Zhang
S2	Find relevant support resources	5	5	DONE	Chenshan Zhang
S3	Wellbeing guidance	5	6	DONE	Chenshan Zhang
S4	Student login	4	0	Deferred	Chenshan Zhang

Appendix B - Individual Contribution

Member	Roles	Stories owned	Evidence	Could improve with more time
Chenshan Zhang	Product owner, developer, tester, documentation owner	S1, S2, S3; S4 deferred	Git commits, app source code, tests, screenshots, prototype video	Add authentication, richer university data, more accessibility testing, and more customer feedback iteration.

Appendix C - Meeting Logs

Meeting ID	Team attendees	Customer / TA	When	Agenda items	Actions and owner
M1	Chenshan Zhang	Self-review	2026-04-29	Define focused MVP for Challenge 3 and select core user stories.	Implement S1 first; owner: Chenshan Zhang.
M2	Chenshan Zhang	Self-review	2026-04-29	Review prototype scope, testing evidence, and video demonstration.	Complete S2, S3, tests, video, and portfolio; owner: Chenshan Zhang.
